

Special issue:

Population Genetics Methods and Software

We invite developers of population genetics software — both established and new — to submit short, accessible articles showcasing their tools. Each summary should clearly explain the software's purpose, strengths, and usage tips, with code and examples shared in a public repository.

Submissions co-authored with PhD students, postdocs, or early-career researchers are especially encouraged. This issue will also feature emerging methods and provide benchmark comparisons using shared datasets like HGDP or KGP.

For more details, please scan the QR code below.

Core Elements

1. Accessible Summaries by Method Developers
2. Practical Resources
3. Balanced Discussion
4. Comparative Analyses
5. Inclusion of Novel Tools

Submission Deadline: August 31, 2025
